Demography

Lecture 12, Thursday Mar 6

Guest: Sharon Sassler

- Professor in Sociology and Public Policy at Cornell
- Demographer with a specialty in social and **family** demography
- Marriage, cohabitation, parenthood, life transitions
- Major data sources: **survey** data (especially longitudinal, or over time) and **panel** data (longitudinal with same subjects)
- Examples available to you for projects:
 - **NSFG**: National Survey of Family Growth, from Centers for Disease Control ([link](#))
 - **PSID**: Panel Study of Income Dynamics, from University of Michigan ([link](#))

A Brief Introduction to Demography

Sharon Sassler, Professor

Is Marriage the best Anti-Poverty Policy?

For Better or For Worse? The Consequences of Marriage and Cohabitation for Single Mothers

Kristi Williams, *Ohio State University*
Sharon Sassler, *Cornell University*
Lisa M. Nicholson, *Ohio State University*

This study examines whether the mental and physical health of single mothers benefit from marriage or cohabitation compared to childless women who marry. Results indicate that marriage is associated with similar declines in psychological distress for single mothers and childless women, but only when that marriage endures. Single mothers do not receive the same physical health benefits from entering an enduring marriage, in part because single mothers have lower levels of marital quality. Entering an exiting marriage is worse for the mental and physical health of single mothers than for other women and in some cases, worse than remaining unpartnered. Enduring cohabiting unions offer no psychological or physical health benefits to either group but lived cohabiting unions are associated with increased distress.

CORNELL POPULATION CENTER

Data Sets?

- For family research → National Survey of Family Growth (NSFG), PRAMS (Pregnancy Risk Assessment Monitoring System), NSFH, NLSY (Nat'l Longitudinal Study of Youth79-Children of NLSY, NLSY97).
- For STEM? SESTAT data (NSF data collection), ACS (American Community Survey)

One of my data accomplishments?

- Improving a question on the NSFG
 - At the time you began living together, were you and [partner] engaged to be married or did you have definite plans to get married?”
 - Options: Yes/No

Can you see any issues with that wording?

- Revised response options:
 - the NSFG modified its survey starting in 2011 to include three response options:
 - Yes, engaged;
 - Not engaged but had definite plans to get married;
 - No, neither engaged nor had definite plans.”

Improved question, or change in role of cohabitation?

Table 3. Union intentions at the initiation of a first cohabitation by sex, National Survey of Family Growth (2002, 2011-2015)		
2002 ^a	Male	Female
Yes	43%	46%
No	57%	54%
	N = 1,783	N = 3,229
2011-2015 ^b		
Yes, engaged to be married	19%	23%
Not engaged but had definite plans to get married	26%	20%
No, neither engaged nor had definite plans	56%	56%
	N = 2,028	N = 3,517
^a Source: Karen Guzzo. 2009. "Marital Intentions and the Stability of First Cohabitations" Journal of Family Issues 30(2):179-205 (Table 1).		
^b Source: Emily Parker. 2020 "Gender Differences in the Marital Plans and Union Transitions of First Cohabitations" Population Research and Policy Review Forthcoming (Table 1).		

A change from 43% of men & 46% of women saying YES, they were engaged, to 19% of men and 23% of women saying yes to that question is a pretty big difference. There is still a gender difference.
